Key Topics Covered: A Diverse Range of Human Behaviors

The handbook delves into a wide variety of topics relevant to evolutionary psychology. These include, but aren't limited to:

- Mate Selection and Sexual Strategies:** This section explores the evolutionary pressures shaping mate preferences, relationship dynamics, and sexual behavior across different cultures and contexts. The handbook examines the role of both conscious and unconscious processes in partner choice, providing evidence for the adaptive significance of these strategies. It addresses classic debates, such as the differences in mating strategies between men and women, and how these strategies are influenced by environmental factors.
- Parental Investment and Kinship:** Understanding parental care is a cornerstone of evolutionary psychology. The handbook examines the evolution of parental investment, considering the costs and benefits of raising offspring. It also explores the complex dynamics of kinship relations, including altruism, cooperation, and conflict within families. The influence of inclusive fitness is a recurring theme in these chapters.
- Aggression and Cooperation:** Human behavior is characterized by both cooperation and aggression. The handbook meticulously analyses the adaptive value of these seemingly contradictory behaviors, exploring the contexts in which each is likely to be favored by natural selection. The complexities of group dynamics, intergroup conflict, and the evolution of social norms are explored in depth.
- Cognitive Biases and Adaptive Problem Solving:** Our cognitive processes aren't always perfectly rational. The handbook discusses how cognitive biases, often viewed as flaws in human reasoning, may actually be adaptive solutions to recurrent problems faced by our ancestors. This perspective shifts our understanding from simple errors to potentially advantageous shortcuts.
